Aviation Safety Regulation Review Submission

I wish to make a submission to the Aviation Safety Regulation Review.

I have found it extremely difficult to keep abreast of CASA regulatory changes with the volumes of material produced to be considered. This added burden is on top of the normal day to day regulatory obligations as well as the administration of running a business and employing staff. For a very small business (5 staff) this task is almost impossible. Additionally, the increasing amount of red tape and administrative obligations being placed on L.A.M.E's and maintenance organisations is adding significant cost to general aviation operations.

In order to attempt to keep track of CASA's directions we maintain membership with AMROBA and have found Ken Cannane's experience and knowledge in global regulatory systems invaluable.

I would like to make the submission of **supporting AMROBA's submission** as I believe their position is one of practicality, safety, economically responsible and will foster General Aviation in this country. We need to get General Aviation back to the thriving industry it once was for all Australians and the economy.

Yours sincerely,

Scott Gurner

Director and L.A.M.E.
