

# What is the science of safe connection?

The science of safe connection is understanding that the technology that allows us to access essential, modern telecommunications services complies with relevant safety standards.

This includes electromagnetic energy (EME) from telecommunications infrastructure and equipment that, when operated below the limits specified in the safety standard, poses no harm to human health.

EME from wireless communications is researched, regulated and safe. To find out more, visit [eme.gov.au](https://eme.gov.au)
