

To whom it may concern, ACMA board.

Thank you for taking the time to read this submission.

The bill of misinformation / disinformation is very concerning and I and my family members strongly oppose this.

Who determines what is misinformation? The key board of ACMA is only 6 individuals?

We all are supposed to be in a free democracy, the people can choose for ourselves, with our own mind what information we want to accept as true or false. The government does not have the right to choose for US.

We all have different belief systems. What I classify as true may be completely differently too what ACMA determines as true.

I do not believe in any form of hatred or harming of people's rights; however, freedom of speech is vital for a democracy.

The voice wants to hear indigenous peoples voice, but what about the rest of society? One cultural race does not make up all of Australia, we live in a multicultural society, we should be one people, with all equal rights.

Social media platforms have already censored people's voices, even when scientists and proven facts were given, the government censored it because it did not agree with the government's narrative. Media stations were silenced and still are, and this is already very concerning.

Australia is still pushing and advocating for false science to be pushed, with the TGA still approving fake vaccines to be safe and effective and mask wearing which science tells do not work. The government's responsibility was to read the research paper / facts from Moderna, Pitzer as they did not state that these fake vaccines would stop transmission or protect you from getting covid.

In this bill the government is exempt from these rules of misinformation? Please explain how this is fair?

This is clearly a dictatorship; freedom of speech is part of being in a supposed free society. Heavy levels of control and censorship already exist, mandates still occurring? Freedom of people's bodily autonomy does not exist.

Fines will be issued if people disagree with government?

What I deem as factual and science like issues around climate change, vaccines, gender, which can be shown with evidence-based information on biology and based on scientists, this research and death rates from vaccine injuries is silenced? So, the facts I and others can provide will be shut down? And will not be heard, only what the government wants?

People are allowed to disagree in respectful manners. To have free open dialogue, isn't this what the government wants for the VOICE referendum?

Please stand for ALL Australian and under natural law, common law of human rights of freedom of speech.

Allow people to view and share their opinions and facts in a fair democracy.

I advocate for our future generations. Think of our children and our own right to have a voice, not just one culture which will separate us. Let us be one Australian people to unite us not divide us.

The covid narrative of safe and effective was a lie. Government yearly say SORRY to one culture as reconciliation which is lovely, however what about the mandates, lockdowns, banning true safe and effective early treatment drugs and protocols for covid people? But this was not allowed. Change the path, the course of this country in positive ways please.

Thank you kindly, from a very concerned, mother, educator, and wife.
