

For critical thinking to occur debate on a subject must be allowed. For example for Science to be Science, we must be able to question it. How can we expect to live in a democracy with out free speech? No free speech, no democracy. Who will these "Fact Checker's be employed by? The Government? Who will fact check the fact checkers? This piece of legislation scares the living day lights out of me and it should scare you too. I would like to say it's the biggest overreach of the Labour Government but in my opinion mandating the Covid jab was but it's not far behind. The Government told us that the jab was "safe and effective", that was certainly misinformation. If it was effective, why did so many people get Covid? If it was safe why are more people dying now than they did in the height of the pandemic? Excess unexplained deaths have increased by 17% in Australia but no one is talking about it and the Government has refused to have a royal commission. Why aren't these deaths being investigated? In my opinion the Government have been the biggest perpetrators for spreading misinformation and yet if this legislation gets approved, they will be exempt from it.

What was deemed as misinformation at the start of the pandemic ended up as being the truth 6 months later. Look at the Sharri Marri reports on the pandemic on Skynews. Her reports were deemed misinformation and she was ridiculed by other media outlets and yet it prompted further investigaton by the Biden Government and it was later deemed to be true that the virus was leaked from a Wuhan lab. This orwelian piece of legislation is all about the Government trying to control debate so they can control legislation. We are not a Communist Country, so do not try to impose communist policies on us. If you do, I am confident their will be civil unrest.
