

To whom it may concern:

Flight paths under 10,000 feet should never be over private homes.

Everyone should have the right to live without noise, pollution and invasion of privacy from aircraft at all times.

New airports should require an EIS on flight paths prior to any start on ground works and before an EIS on the actual airport.

Every airport should have a night curfew no matter what.

Time for the people to hold all governments and politicians responsible for their actions.
