

# Digital equity and inclusion

## Across Australia, wireless communication helps you stay connected

Accessing improved connectivity is no longer a luxury – it's essential. As many services shift to digital-only models, improvements in wireless communication help facilitate access to these services.

All Australians regardless of where they live or work expect to have a reliable mobile service. They expect mobile connectivity in the same way as they expect to have other essential services like water and electricity.

Telecommunications infrastructure enables this essential connectivity and fosters digital inclusion, as it drives productivity growth and enables participation in our digital society.

In Australia, the electromagnetic energy (EME) used to enable this technology is researched, regulated and safe.
