LEVEL CROSSING SAFETY ON TRACK AS NATIONAL STRATEGY RELEASED

National Level Crossing Safety Strategy 2023-32

Australian Infrastructure and Transport Ministers have endorsed the National Level Crossing Safety Strategy 2023–2032.

The Strategy has been developed by the National Level Crossing Safety Committee, comprising representatives from federal, state and local governments, rail industry associations and regulators; and in consultation with academics, safety technology developers and providers, and public and community advocates.

The strategy sets out a clear vision for working towards zero harm on the level crossing network, including:

- Improving public education and enforcement
- Leveraging emerging technology and innovation
- Identifying early, low-cost and effective safety improvements
- Developing improved data and knowledge
- Increasing coordination and knowledge sharing by those responsible for safety.

The National Level Crossing Safety Committee members will continue to work together to progress the strategy and implement key actions in the workplan to improve safety at level crossings.
