Short comment

Australia has the worst emissions standards in the civilised world. Australians are exposed to unregulated amounts of carcinogenic sulfur dioxide, nitrogen oxides, formaldehyde, benzene and soot, particularly for those of us who live in a city. The government is finally introducing the NVES (new vehicle emissions standards). However, the current plan is to exempt some of the most polluting, largest motor vehicles, i.e. models like Toyota Landcruiser 70, Ram 1500 Trx and 2500, and the Chevrolet Silverado HD.

Please protect the health of our children and grandchildren: do not exempt vehicles with a mass exceeding 3.5 from the fuel efficiency requirement.
