

2024 Regional Telecommunications Independent Review 2024.

SUMMARY

I object to the continued rollout of proven-to-be-harmful telecommunications technologies in Australia and globally.

Unfortunately, the “Independent Review” that you are conducting is biased, and assumes that these existing and emerging telecommunications technologies are NOT harmful.

Furthermore, the terms of reference are manipulative. Respondents are guided to submit their opinions *on the terms supplied*, implying that the health and safety considerations, among others, have passed stringent testing and review. Nothing could be further from the truth.

Had the terms of reference included the fact that the rollout of “improved telecommunications services came with known health, mental health risks and significant freedom infringements – I’m sure this consultation process would have VASTLY different results.

It’s like any sales process: Give them limited options, and you can manipulate the results to suit your predestined agenda. It works even better if you throw in some “emergency, emergency”, “natural disasters” and fear! Groundhog day?

EVIDENCE

Decades of research has already been conducted into 5G and other electromagnetic fields (EMFs) and *the results are in.*

Microwave technologies have been used as weapons in the military for decades. Please refer to the information shared by me on Substack’s *Mudgee Eye* (November 2023 and July 2024):

<https://mudgeeeye.substack.com/p/5g-microwave-as-a-weapon>

Of particular interest here are the two lengthy interviews with world expert Barrie Trower.

<https://mudgeeeye.substack.com/p/microwaves-5g-and-other-harmful-intrusions>

Serious questions are being asked about the integrity of the International Commission on Non-Ionizing Radiation – ICNIRP.

It’s a huge industry, and there’s a lot of money to be made.

Harms caused by EMFs include, but are not limited to:

- Cancer, brain tumors, glioma and acoustic neuroma, meningioma risk, breast cancer promotion, multifocal breast cancer in young women, childhood leukemia,
- Fertility problems – including lowered sperm count and quality; lowered estrogen, progesterone and testosterone levels; follicle loss; increased spontaneous abortion; lowered libido; DNA damage, adverse fetal and childhood health effects of in-utero exposure to EMFs, to name a few,
- Pollination and food security exposures: including destruction of bee populations, queen bee development and mating problems, bee diversity challenges, honeybee worker piping, changes in honeybee behaviour and biology,

- Mental health problems, cognitive impairment, tinnitus, effects on brain oscillatory activity during cognitive processing, increased generalized anxiety disorder, self-reported health symptoms, reduced cognitive capacity, stress, sleep disturbances, widespread neuropsychiatric effects including depression and major depression,
- Gene mutations in cardiac arrhythmias, increased resting blood pressure, neurodegenerative diseases, etc, etc.

(Source: Mercola. Dr. Joseph, *EMF*D: 5G, WiFi & Cell Phones: Hidden Harms and How to Protect Yourself*. McPherson's Printing Group, 2020. Appendix B, pages 251 to 320 – [listing 69 pages of Studies That Demonstrate Harmful Effects of EMFs.](#))

We are watching with concern as the Australian Government and international organizations continue to roll out harmful, even deadly initiatives, over many decades now, in the name of health, security, disaster mitigation, climate change, SMART technologies and cities, Digital ID, CBDC and monetary controls, unelected globalist agendas (such as One Health, global Pandemic Treaties and United Nations initiatives), censorship and surveillance, etc.

All these issues have one thing in common, and have one way of being implemented: through a global control grid that covers all living people (even animals - via eID), and every area on the globe.

These so-called-telecommunications-developments ENABLE that CONTROL and MANIPULATION. i.e. SLAVERY - by unelected and unwelcome forces.

Deceptively siloing these connected and damaging agendas is part of the unelected harmful globalists' deception and plan.

Previously considered the domain of "conspiracy theorists" it is now unfolding in plain site for everyone to see.

We see it, and we do not consent.

Furthermore, pushing these developments, while apparently assisting First Nations communities, enabling the advancement of communications during emergencies and natural disasters and the development of regional communities **is a veiled attempt** to bring into fruition a number of very dubious and harmful agendas, some hiding behind the "climate change" rhetoric – including "Managed Retreat"; dislocation and relocation of communities; decisions about where we live and how we live; while we appear to be bombarded with ever increasing rates, power bills, water bills – now that we have adopted greener and cleaner energy and communications and resource management.

For research on local flood plans, fire and tsunami (!) studies, "Managed Retreat", Disaster Planning and Mitigation, Australia's adoption of global climate change goals, privatized infrastructure, among other agendas - see the important work of Kate Mason, on Substack and other platforms. E.g. <https://kate739.substack.com/p/managed-retreat-adaption-plans-privatised>

Many things start to add up, when you do the correct research, and observe how all the silos are part of the big picture.

Care of First Nations people has been totally neglected for over 250 years – and we are lead to believe the telecommunications industry is caring about them now?

Well, I'm not buying it.

Not forgetting the enormous amounts of power that is required to feed this global agenda. And the huge cost of powering the agenda. Little wonder many countries of the world are starting to be covered in silver panels, and Australia is now talking of 7 new nuclear power plants.

No, I do not want the countryside in rural Australia covered in solar panels, wind turbines and nuclear power plants, to create the enormous amount of energy required to run a digital world – monitoring every purchase we make, every kilometre we drive, every financial transaction, every social media post we make, every triangulated blue-toothed electronic device in our immediate vicinity, every shower we take, every baby that gurgles, every internet search we do, every supermarket we enter, every question we ask Siri, every AI that participates...

No, you really couldn't make this stuff up.

And we are paying enormous amounts of “public servants” (hmmm!) to bring about these harmful, dystopian manipulations.

Furthermore, the Australian Government has previously conducted inquiries into telecommunications developments, including 5G, which appear to have been ignored.

e.g. The Australian Government held an Inquiry into 5G in Australia commencing September 2019, with public hearing occurring in February 2020. A number of submissions made to this inquiry **highlighting safety issues** were apparently ignored.

There are a number of important submissions made to this inquiry, which are relevant today.

https://www.aph.gov.au/Parliamentary_Business/Committees/House/Communications/5G

We pay many “experts” in government to ensure that our safety, freedom, health, natural resources, animals, plants, air, water, finances, goodwill etc., are NOT compromised, and yet we are asked to make submissions when we can clearly see that Australians' wishes are no longer being met.

Why?

Because it doesn't suit the globalist agenda in 2024?
