

When 3G was used, no one had problems except for a few outlying areas who eventually had towers erected Coverage was available from here to Perth Now 4g has taken over, coverage is no longer available right thru to Perth We live 15 km from town and don't have coverage in our house or near it Many of our friends despair at the lack of coverage even right on the town boundary Surely someone with a few brains could have foreseen this problem and left 3G in place until enough towers could be erected to overcome lack of coverage 5G is in Esperance in a few spots....what a waste, towers have to be so close it is an extremely expensive option Reminds me of Aust post, the idiots in cities sing the praises of the last manager Well it takes up to 14 days for a letter posted in Esperance to get to the recipient in Esperance, mail from the Eastern States is at best two weeks You may as well just chuck your hands in the air and say who cares about our country Residents !
