

I manage a property in the far north east of Tasmania and for the last few years we have not had a reasonable phone service Ever since CDMA ceased our phone service has gone backwards,it continually tries to alternate between 3G and 4G with the result that the battery goes flat. we have employees and contractors on many large properties in the area ,should there be an accident we could not contact an ambulance as the phone continually drops out,the same applies for road accidents. During the summer fire season we were unable to phone out. A lady who had a fall in Gladstone had to wait six hours. I am sending this on my mother's email as I do not know when you would receive mine.

Faithfully.
