

Good Morning

I hope my input is not too late.

I am a real estate agent who travels the length and breadth of the South East from Tailem Bend to Port Macdonald the Vic Border and the sea.

The phone service is quite good over approximately 50% of the roads travelled but the remainder is the opposite quite ordinary.

I have a cel fi pro mobile repeater booster and large external antenna fitted to my car which helps considerably.

I strongly suggest more work is undertaken and more towers installed onto the existing telecommunications infrastructure across the region

for example the GRN towers located here and there that dont have a telstra or optus repeater tower located there.

There is a large GRN tower located at "Kirra" on the Ngarkat highway, my understanding is that has been several proposals over the years to have a mobile phone repeater tower incorporated there BUT to no avail der this is a very sensible location and would provide service the busy Ngarkat Highway and surrounding communities. Likewise the communications west of Keith is ordinary, surely there is a range out there that could service the princes highway/Coorong and west of Keith & Tintinara.

I am happy for my input to be non confidential if it helps

Thank you

Kind regards

*Geoff*
