

Consultation on Telstra request for extensions to Ministerial exemptions for its South Brisbane and Velocity networks

The Velocity network is a stain on the capabilities of fibre networks. There are 2 options offered currently on the network, 100/5 and 30/1. Both of which are wholly unsuitable in today's world. Telstra continued refusal to even consider making the network comparable to the NBN fibre networks can not continue.

There are 2 options:

1. Telstra can bring Velocity up to speed and open it up for wholesale access exactly as it is with NBN, or
2. Sell the network to NBN.

Keeping those of us on the network as it stands can not continue! Something needs to be done.
